

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-10 (Cancelled)

Claim 11 (New): A control apparatus of a hybrid construction machine for executing works by charging a main battery with power of a power generator to be driven by an engine and driving electric motors by means of power discharged from at least the main battery, comprising:

a generator output control body for varying power output from the power generator in accordance with content of work performed by the hybrid construction machine.

Claim 12 (New): The control apparatus of a hybrid construction machine according to claim 11, further comprising:

a manipulating lever to be manipulated by an operator; and

a work determination body for determining the content of the work on the basis of a manipulating signal from the manipulating lever and outputting the content of the work to the generator output control body.

Claim 13 (New): The control apparatus of a hybrid construction machine according to claim 11, further comprising:

a work mode switch with which the content of work can be selected by an operator;
and

a switch detection body for detecting the content of the work selected with the work mode switch and outputting the content of the work to the generator output control body.

Claim 14 (New): A control apparatus of a hybrid construction machine for executing work by charging a main battery with power of a power generator to be driven by an engine and driving electric motors by means of power of at least one of the power generator and the main battery, comprising:

a work speed regulation body for regulating work speed in accordance with content of the work when power of the power generator is a predetermined value or less.

Claim 15 (New): The control apparatus of a hybrid construction machine according to claim 14, further comprising:

a manipulating lever to be manipulated by an operator; and

a work determination body for determining the content of work on the basis of manipulating signal from the manipulating lever and outputting the content of the work to the work speed regulation body.

Claim 16 (New): The control apparatus of a hybrid construction machine according to claim 14, further comprising:

a work mode switch with which the content of work can be selected by an operator, and

a switch detection body for detecting the content of the work selected with the work mode switch and outputting the content of the work to the work speed regulation body.

Claim 17 (New): The control apparatus of a hybrid construction machine according to any of claims 11-16, wherein the hybrid construction machine is a hybrid excavator.
